## ABOUT US

### MISSION

Our mission is to keep children away from computer screens. This is why we offer effective, modern and safe play equipment.

### SAFETY

All our products are designed and manufactured in accordance with the standards of Polish and European law. The devices we offer hold certificates of the Institute of Technical Inspection issued in the system accredited by the State Center for Accreditation. This is the best quality and safety guarantee of MagicNets play equipment.

### QUALITY WITHOUT COMPROMISE

Our priority is to take care of every detail. We use the highest quality materials for the production of our devices, which makes MagicNets play equipment not only durable and safe but also aesthetic. PRODUCTION PROCESS takes place under the watchful eye of qualified staff who take care of the high quality of toys leaving the factory.

### ABOUT DEVICES

MagicNets devices are a disruptive technology in European market. Magic nets, which are the main element of our structures, allow for the comprehensive development of the child and play limited only by imagination. Climbing children exercise their bodies (cleverness, agility) and minds (creative thinking) at the same time.

### FOR CUSTOMERS

We specialize mainly in rope devices. The most popular products are pyramids with heights from 2.4m up to 8m and rope sets made of a wide range of modules, resembling high ropes course.

Our proposal also includes single devices that delight with an interesting architectural form. The important thing is that each investment can be divided into stages. Your playground will become unique and unconventional as it is possible to combine sets with pyramids and other devices from our offer.

For those of you who want to supplement their vision of the playground with traditional devices, we have created individual product lines: stainless steel sets, swings, spring riders and rotating equipment. Our specialists provide professional advice, present optimal solutions and help you choose the right equipment for your budget and terrain. They also help you design the entire playground from scratch.

## ILLUMINATIONS

Our products perform a representative function more and more often, therefore we want to present you a product - lighting devices using LED technology.

The diodes applied in this system are RGB LEDs, which enable us to obtain any colour of illumination. Installed electronic module allows to program colour change cycle freely.

The installation may be supplied in two ways: with an existing network or by using photovoltaic panels (commonly referred to as solars). Photovoltaic panels are dedicated for investors aimed at saving energy.

## ADVANTAGES OF THIS SOLUTION:

- exposition of a prestigious investment,
- increasing security, deterring potential vandals,
- in the autumn-winter-spring period, children can use the toys longer, so they spend more time actively, playing outdoor, not in front of the TV or computer,
- low energy consumption thanks to the LED technology used,
- the ability to create your own lighting program (a variety of colors and the ability to turn on and off individual light sources, change the intensity of lighting),
- increasing the aesthetic value of the investment,
- making the investment more attractive,
- novelty – it is an innovative solution in today's market.

## SHADES

Shading is our answer to the climate change. During the summer, we deal with excessive sunlight more and more often, which is very dangerous for our children. The heat waves reaching forty degrees of Celsius have become a reality in the Europe. Skin diseases, strokes, dehydration are just some of the consequences of staying in the sun for too long. Concerned about children using our devices, we have introduced the described product.

The device consists of a membrane, a tensioning set, a supporting structure and foundations. The membrane used is available in a wide range of colors and is characterized by a 4% perforation. The perforation allows the penetration of heated air, also vertically upwards, thus preventing the formation of hot air stagnation, which in turn affects the comfort of use. Bearing in mind the large forces acting on this type of structure, it is calculated individually by the constructor for specific ground conditions and wind zone.

# TREE HOUSES

Tree houses are constructions reaching the height of almost 11 meters. Such device will impress both children and adults. Our tree houses are equipped with various types of entrances and slides, which provides users with the opportunity for varied play. Openwork rope tunnels suspended high above the surrounding terrain provide an unforgettable experience for users. They allow architects to create a unique, tailor-made use of space. Designed or existing paths may run under the tunnels creating a very interesting visual effect.

We offer a choice of 3 design lines and an unlimited number of house configurations.

# INDIVIDUAL PROJECTS

Individual projects are our source of afflation, inspiration and the main factor of the company's The MagicNets development.

In this section, our designers develop their passions. We systematically enrich our offer with new devices. Over time, individual projects are added to our standard offer.

Team is open to your suggestions regarding the theme and look of the devices. In cooperation with you, we are able to create a pioneering project that will be a perfect showcase for your playground.

## SINGLE DEVICES

In order to fully satisfy our customers' needs, we have introduced "Single devices" to our offer. These are constructions that fall between modules and sets with their attractiveness and price.

Our single devices captures the enjoyable and challenging nature of pure climbing with no limits. Their interesting architectonic form will not let kids get bored. Different heights and many levels will provide a lot of fun for both older and younger children.

It is an ideal solution for customers who do not have enough space to mount a large set.

## — ROPE PYRAMIDS —

Pyramids are a family of products that enable children to break down barriers and reach new heights, while ensuring their safety. Devices up to 9m height ensure unforgettable moments not only to children. A carefully thought-out design prevents the user from falling off.

They are perfect for public playgrounds, parks, squares and places where customers have limited space. Many children can play on a relatively small area at the same time.

The full database of our products, technical specifications, DWG files and a rich photo gallery available at [www.magicnets.pl/en](http://www.magicnets.pl/en).

## — DIAMOND COLLECTION —

If you value safety, the highest quality, reliability, innovative design and maintenance-free play equipment - the DIAMOND COLLECTION is right for you.

We have designed devices from the best materials available in the market: stainless steel, plastics (HPL, HDPE), 18mm polyamide rope reinforced with steel. Maintenance of DIAMOND COLLECTION is virtually not required as we use only maintenance-free materials with high resistance to damage and changeable weather conditions.

The diamond playground, thanks to its original design and quality, will create a prestigious showcase in every city. We offer three lines of devices: STANDARD, OCEAN and DESERT collections.

## GALAXY

Galaxy by MagicNets are the compositions made from various rope sets commonly referred to as jungle gyms. They are made up of module-devices which can be treated as independent play devices, which, above all, are intended for making sets.

The new catalog presents a refreshed version of the Galaxy with its new modules and add-ons equipped with various types of slides. As a novelty, we have also introduced the possibility to choose any color of the set according to an individual vision and the selection of graphic decorations from the ANIMAL or MONSTER lines.

The folder contains detailed technical information about majority of the products available in the Galaxy section. The full database of our products, technical specifications, DWG files and a rich photo gallery available at [www.magicnets.pl/en](http://www.magicnets.pl/en).

## SWINGS

The line of swings created by MagicNets confirms the company's policy in terms of promoting high quality.

All construction elements (excluding MILKUS and NAMAKA swings), slings, chains and connectors are made of acid-resistant steel, commonly known as stainless steel. Maintenance-free and long life are ensured by ball-bearing slings.

## SURFACES

In our offer you can find most of the impact absorbing surfaces recommended by the standard 1176-1. When choosing a surface remember how important its substrate is. Most accidents occurring in the playgrounds (and most dangerous ones) are caused by using the wrong surface or by not using it at all. We provide natural surfaces such as gravel or sand as well as artificial synthetic surfaces.

### SYNTHETIC SURFACES

We make safe "poured" synthetic surfaces. Thanks to our own equipment and qualified staff, we are able to implement the most demanding projects all over Poland.

Our offer includes basic colors, such as: red, green, black and a wide range of colors available on request.

#### Properties:

- certified in accordance with EN 1176-1
- with PZH approval
- uniform surface, no joints
- excellent shock absorption
- water permeable
- wear-resistant

No. 503

## SYNTHETIC SURFACE

The type of surface should be selected taking into account the free fall height of the devices that will be installed on it. We offer 5 types of surfaces.

1. HOMOGENIC COLORED WEAR LAYER (EPDM).
2. HIGHLY ELASTIC BUMPING LAYER (SBR).
3. FOUNDATION OF NATURAL AGGREGATE.

PALISADE BORDER

To be used as the edge of the surface. Made of stakes with a diameter of 10 cm and a length of 70 cm. Concreted and non-concreted version available.

## COMPONENTS

MagicNets manufactures rope components. The offer is addressed to manufacturers of play equipment and managers who would like to modernize or repair the existing playground. Simply submit a handwritten, dimensioned sketch, and our engineers will do the one in accordance with a EN 1176 standard.

We also provide assistance with the selection of construction solutions as we have many years of experience gained in the construction of rope components for playgrounds.

## ROPE BRIDGES

Are you an architect looking for innovative solutions that will enhance the designed space?

ROPE BRIDGES are a great replacement for a standard footbridge and make a classic crossing over a river, stream or path more attractive. Our designers will help you with the design of the bridge.

The dimensions and visual style will depend on individual preferences and local possibilities.

Have a look at the example visualizations.

# TECHNOLOGY

## STAINLESS STEEL CONSTRUCTIONS

In devices which do not require specially reinforced steel, we use acid-resistant steel, commonly known as stainless steel. The MagicNets swing line, the diamond collection and many individual elements in various devices produced by MagicNets are made of stainless steel. The use of such a material ensures maintenance-free use and an unusual appearance of the device.

## FOUNDATIONS

The foundations are made of reinforced concrete base of high-strength concrete C25 / 30 (B30). The foundation level does not exceed 1.3 m.

## SURFACES

We provide shock-absorbing surfaces in accordance with PN-EN 1176-1. Their task is to ensure the safety of playing children. We make the following surfaces:

- synthetic poured with a thickness of 35-120 mm,
- sand with a fraction of 0.25 - 2 mm with a thickness of 200 - 300 mm,
- gravel with a fraction of 2 - 8 mm and a thickness of 200 - 300 mm.

## DIAPHRAGM MADE OF RUBBER

The devices are enriched with a rubber mat reinforced with four layers of plastic mesh. The mat we use is free of PAH compounds (polycyclic aromatic hydrocarbons), which ensures the safety of our children. We use mats resistant to weather conditions, including UV rays, with a thickness of 8 and 10 mm in various colors.

## ROPE

18 mm POLYAMIDE ROPE, BRAIDED, GLUED and 16 mm POLYAMIDE ROPE. More details on page 150.

## BLACK STEEL CONSTRUCTIONS

We make larger structures using structural steel. The main anti-corrosion protection is a hot dip galvanized coating with a thickness of at least 100 microns. Some of the designs are additionally secured against corrosion as a standard, others can be additionally secured on customer's request. Depending on the needs and possibilities, we use technologies of powder coating or "wet" spray painting.

## HPL PLATES WITH GRAPHICS

We use HPL high-pressure laminate in the equipment and decorative elements for toys. We use plates of various thicknesses which are characterized by high impact strength and resistance to weather conditions. Available in many colors and patterns, they offer endless design possibilities.

## THIMBLES AND SCREWS

In order to ensure the highest possible durability and to maintain a high aesthetic effect, we use only stainless steel thimbles and screws. Such a procedure guarantees the high quality of the offered products.

## CONNECTORS

In our projects, we use aluminum and plastic connectors. The natural properties of aluminum alloys and the highest quality plastics ensure high durability and strength. The failure-free rope structures are ensured by the proprietary system of connectors.

## CLAMP + EYING BOLT

The element enabling attaching the nets to the pole is a specially designed clamp. It is made of very high-strength cast steel. Its anticorrosive protection consists of three layers of chlorinated rubber paint.

The clamp is connected with an eyebolt which is made of stainless steel.

# ROPE

The rope used is specially designed for the production of playgrounds. We're using only child-friendly surface and toxic-free materials. Our rope has high resistance to UV rays and extreme weather conditions - especially prevents from corrosion, thanks to galvanised steel rings. On the top of these features, our rope is equipped with steel braid, that prevents vandals from cutting the rope.

In the production of our devices, we use a rope with a diameter of 18 and 16 mm.

## POLYAMIDE ROPE, BRAIDED, GLUED

After years of gaining experience and using various rope models, we currently use a POLYAMIDE, TWISTED, GLUED rope with a diameter of 18 mm.

## ROPE CONSTRUCTION

The rope is made of galvanized steel strings twisted into six strands. Each of the strands is glued into a polyamide sheath. Main properties of the rope used:

- the rope sheath is braided and not twisted. Such a polyamide sheath is characterized by a higher abrasion resistance, and therefore extends the life of the rope.
- steel strings are glued together and with a polyamide sheath. This solution makes the rope more compact, it is impossible to move the braid in relation to the steel strands.

## We certify our products in INT.

For years MagicNets has been cooperating with the Institute of Technical Inspection which is an accredited certifying body for many products including playgrounds. The awareness of the market needs and the desire to manufacture the highest quality products prompts us to have them verified by specialists. The certificates issued by INT confirm that our products are safe and comply with the relevant standards.

## How our certificates look like?

The certificates contain the names of the products with the corresponding codes, the expiry date and an individual number by which you can verify the certificate. In addition, they have the PCA accreditation mark with the number of the INT certification body (AC 171). **The accreditation mark means that we have certified our products in an accredited program, and this process is supervised by the Polish Center for Accreditation (PCA)** - a government institution that confirms the competence of certification bodies. In accordance with the EU regulation, accredited certificates allow us to use our devices globally, in particular in the European Union and associated countries.

## Why do we choose accredited certification?

We are confident that our products conform the highest standards, therefore we are not afraid to undergo restrictive assessments in an accredited type 3 program - with constant supervision over the product and the production plant (according to PN-EN ISO / IEC 17067: 2014-01). We consciously choose accredited certification in INT, providing you with a proof of trust in the form of a certificate with the PCA mark.
